

1. /api/dashboard/course-experience/:userId/:courseId?second

Methods - [GET]

Expected JSON Response -

```
{
  "status": "progress_saved",
  "is_completed": true
}
```

2. /api/gateway/course-ingest

Methods - [POST]

Headers -

“Content-Type”: “application/json”

Sample payload request

```
{
  "course_id": "7",
  "title": "Mastering python",
  "instructions": "provide the output of following command",
  "starter_code": "print(sum([len([1,2,3,4,5])))",
  "expected_output": "5"
}
```

Expected JSON Response -

```
{
  "status": "challenge_created",
  "challenge_id": 4
}
```

3. /api/gateway/challenges/:challengeId/submit

Methods - [POST]

Sample payload request

```
{
```

```
"Output": "5"
}
```

Expected JSON Response -

```
{
  "status": "EVALUATION_QUEUED_IN_SANDBOX",
  "tracking_task_id": "69487dd3-7dc8-4db5-bcf6-0eacb7b9632c",
  "details": "Your code compilation execution loop is running asynchronously in our
cluster."
}
```

4. /api/gateway/tasks/:taskId

Methods - [GET]

Expected JSON Response

```
{
  "task_id": "<taskId>",
  "status": "SUCCESS",
  "result": {
    "challenge_id": 3,
    "passed": true,
    "message": "Correct! Compilation passed."
  }
}
```

Design Patterns and additional features

- Rate Limiting at django backend layer
- Circuit breaker at api gateway level
- PyTest test cases
- Bash script for running pytest, db migrations
- Gunicorn framework for django deployment
